DETAILED ACTION

Election/Restrictions

This application contains claims directed to the following patentably distinct species of the claimed invention:

Specie A: a target for detection as recited in claim 1, 8, 24, and 31.

Specie B: a mode of determining splice variants as recited in claims 9 and 10.

Specie C: an annotation datum selection basis as recite din claims 16, 17, 33, 34, 44, and 45.

Specie D: an enabling mode as recited in claims 18, 20, and 21.

Species of group A, different detection targets are patentably distinct because they are structurally unrelated, and each has a distinct chemical composition and function, therefore data for each sample are independent.

Species of group B, modes for determining splice variants are divergent because data generated for one model is expected to be different from data generated by any other model.

Species of group C, selection of display types are distinct because they are structurally unrelated, and each has a distinct chemical composition and function, therefore data for each substance are independent.

Species of group D, enabling modes are divergent because they different arts and data acquired for each substrate is different from data generated by any other type of substrate.

Art Unit: 1631

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable.

Currently, 3-6, 11-15, 19, 22-23, 25-30, 32, and 35-43 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 1631

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Marina Lebedeva whose telephone number is (571)272-6101. The examiner can normally be reached on M-F 8-5.
